eLearning

Research and Review...

Vinkle Srivastav

Objective

What is eLearning

eLearning is the use of computers using server based software system to create and deliver educational material to customer , prospects, employees and students. So it is about new blend of resources, interactivity, performance, support and structured learning activities.

Key Benefits

- Any where , any time Learning.
- Maximize efficiency and reducing complexity by providing common access point for content.
- It manages the delivery and tracking of courses, manages critical points like safety issues, operating procedure , environmental standards.

What is eLearning

Categories of Learning Delivery.

1. **Learner Led:** Asynchronous On- Demand Learning.
2. **Instructor - led:** Content is presented by instructor Live or Virtually.
3. **Embedded:** Included performance through Just in Time help.

NEUROSURGERY EDUCATION AND TRAINING SCHOOL

Department of Neurosurgery

What is eLearning

← Live (synchronous)

(asynchronous) On Demand →

Face to Face
Classroom

- Physical Classroom
- Field Trips
- Lab

Live
Online

- Virtual Classroom
- Webinar

Coaching

- Coaching
- Mentoring

Collaboration
& Community

- Portal Site
- Blog
- Wiki
- Chat
- IM
- Threaded Discussion
- VoIP

Multimedia

- Video Streaming
- Podcasts
- Distance Learning
- CD-ROM/ DVD

Web-Based
Learning

- Internet/ Intranet
- Self-paced Tutorials
- Simulation
- Games

Performance
Support

- Knowledge Management
- Workflow Automation
- Performance Support
- Mobile & Wireless

2.

Learning
Technology
Ecosystem

3.

eLearning
Standards

Why Standards

1. To enable interoperability on different platform.
2. Protection of investment on content development.
3. Exchange of content locally and globally.
4. Simplify integration and focus competition.
5. Reduce cost & create market for buyers and sellers.

3.

eLearning Standards

There are number of organizations working to develop eLearning standards

AICC - [http:// www.aicc.org/](http://www.aicc.org/)

Focuses on standards for airline training e.g. tests, lessons, modules etc.

ADL - [http:// www.adlnet.gov/](http://www.adlnet.gov/)

- US Federal government initiative.
- Development of SCORM.

IEEE LTSC - [http:// www.ieeeeltsc.org/](http://www.ieeeeltsc.org/)

Accredits the standards for US that emerges from the other groups.

EDUCAUSE Institutional Management System (IMS)

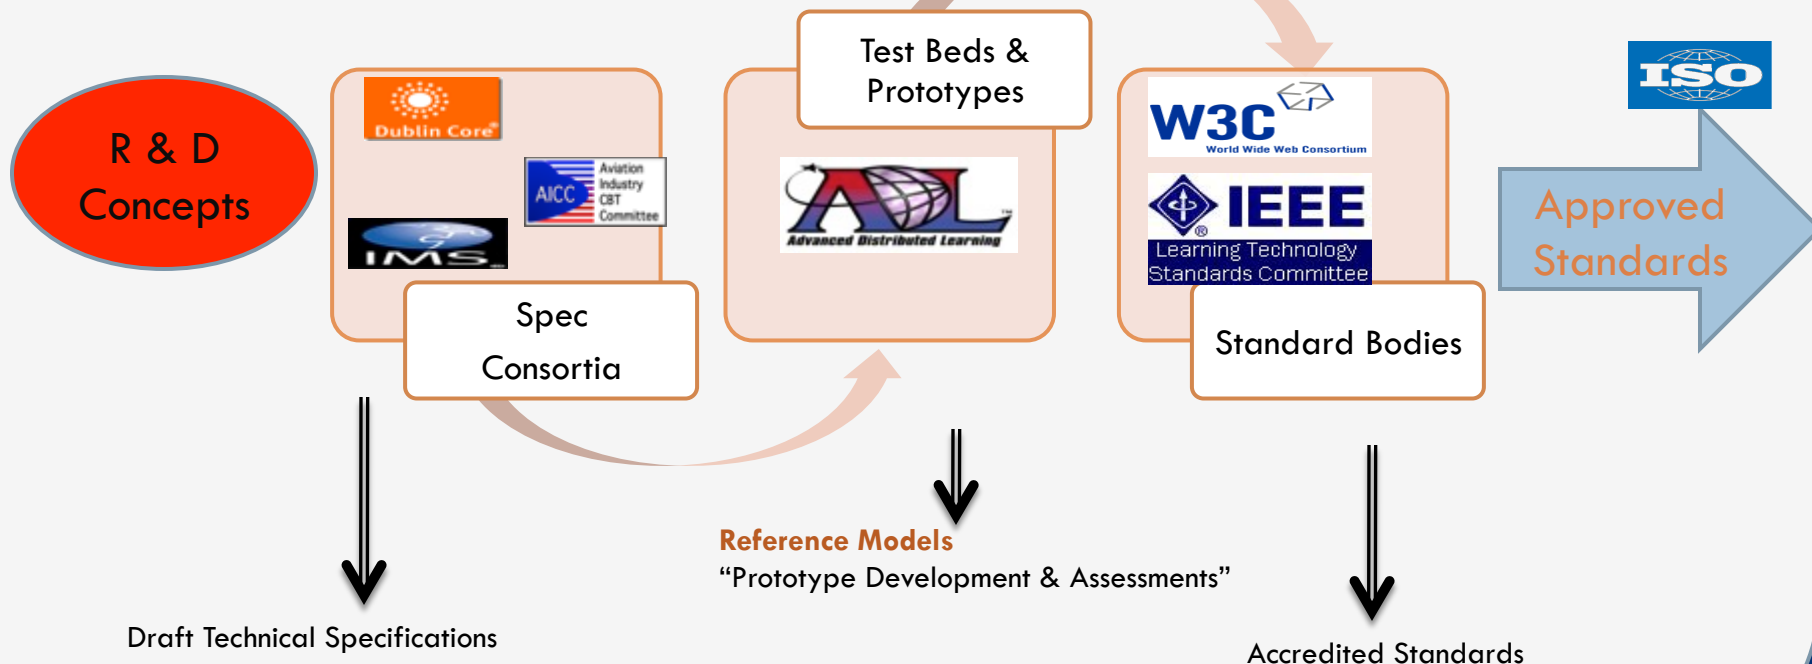

[http:// www.imsglobal.org/](http://www.imsglobal.org/)

- Vendor group working to build standards for eLearning based on work of AICC

3.

eLearning
Standards

How Standards Evolve

3.

eLearning
Standards

Introduction to ADL

Founded in 1997 to standardize and modernize training and education delivery for U.S. Dept. of Defense (DoD)

- Develop & implement learning technologies across DoD and the federal government.
- Collaborate with government, industry and academia to promote international specifications and standards for designing and delivering learning content.

3.

eLearning
Standards

ADL's High level Requirement

1. **Accessibility.** Ability to locate and access instructional component from multiple locations and deliver them to other locations.
2. **Interoperability.** Ability to take instructional component developed in one system and use them in another system.
3. **Durability.** Ability to withstand technology changes over time without costly redesign, reconfiguration or recoding.
4. **Reusability.** Ability to to use instructional component in multiple applications, courses and contexts.

3.

eLearning
Standards

SCORM – Shareable Content Object Reference Model

1. **Content Aggregation** -> Way of aggregating or collecting group of resources that are necessary for delivering a learning trading or assessment experience.
3. **Run Time Environment.** -> How do we send Data from Larning Content to LMS, between two LMS, between testing system and reporting system.
3. **Sequencing and Navigation.**-> Defines how do we sequence the course on the learner based interaction with the course.

3.

eLearning
Standards

SCORM Content Aggregation

For content developers, the biggest question is often “How do I make my existing e-learning content SCORM conformant ?”

Content is generally compatible with SCORM if:

- It can be delivered via a web browser
- It can be self-contained (i.e. packaged with all dependencies wholly in a ZIP file)
- It does NOT depend on server-side scripting languages (such as JSP, ASP and PHP)
- It does NOT depend on external files or external URLs

General steps for making e-learning content SCORM conformant:

- Ensure content meets SCORM compatibility requirements (above)
- Organize all content files (including dependencies) into a single directory structure
- Define and describe the content using an XML manifest file as described by SCORM
- Package all the content and necessary files into a ZIP file

3.

eLearning
Standards

SCORM Content Aggregation

Key Terms:

1. Content Packages
2. Manifest File
3. Resources
4. Organizations.
5. Meta Data.
6. Shareable Content Objects(SCOs)

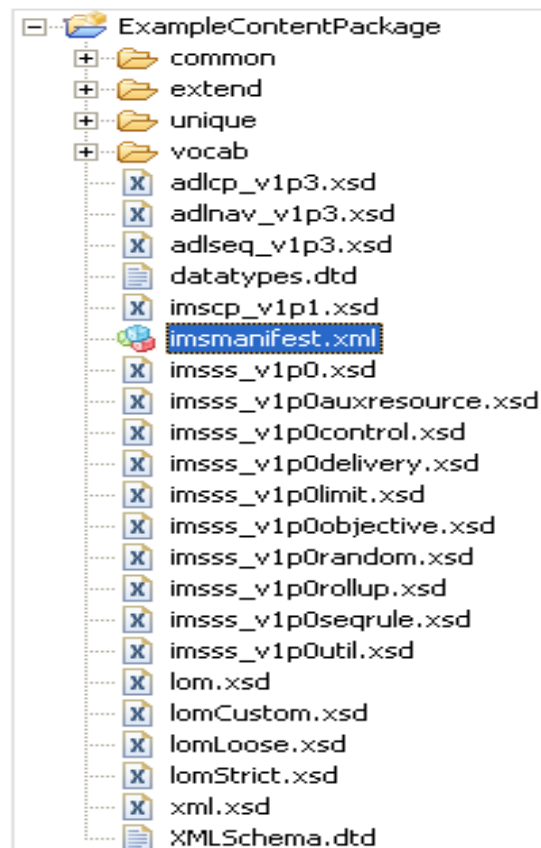

3.

eLearning
Standards

SCORM Content Aggregation

1. Content Packages

- XML manifest file (imsmanifest.xml)
- All schema/definition (.xsd and .dtd) files referenced by the manifest file
- All resource files used by the content package and its learning activities

3.

eLearning
Standards

SCORM Content Aggregation

2. Manifest File.

SCORM content packages contain an XML manifest file that describes the package and its contents. The manifest file is a structured inventory of the content of the package. The name of the manifest file is always **imsmanifest.xml** and it must appear in the root of the content package.

3. Resources

Resources come in two flavors: *Assets* and *Shareable Content Objects* (SCOs).

An asset is a simple resource, such as a static HTML page or a PDF document, or collection of files, such as images and a style-sheet, which does not make use of the run-time API defined by SCORM. Therefore, an asset does not communicate with the run-time environment delivering it.

A shareable content object (SCO) is a resource that communicates with the delivering run-time environment via the SCORM run-time API.

3.

eLearning
Standards

SCORM Content Aggregation

4. Organizations.

A content package can define one or more organizations that describe how the resources are logically organized into a learning experience. An organization defines a hierarchical **activity tree**.

5. Meta Data.

Metadata can be used to describe elements of a content package in its manifest file. Metadata allows learning resources to be found when stored in a content package or in a repository. When a learning resource is intended to be reusable, it is a best practice to describe it with metadata. Describing learning objects with metadata facilitates their search and discovery across systems.

3.

eLearning
Standards

SCORM Content Aggregation

6. Shareable Content Objects(SCOs)

A Shareable Content Object (SCO) is a launchable learning object (resource) that communicates with the run-time environment that launched it. A SCO must be designed so that it can be launched in a standalone web window or in a frame in an HTML frameset.

A SCO is special, because, when launched for a learner in the learner's web browser, it will communicate information back to the LMS that launched it, often a remote server. This communication allows the LMS to track information pertaining to the learner's experience.

3.

eLearning
Standards

SCORM Run Time Environment

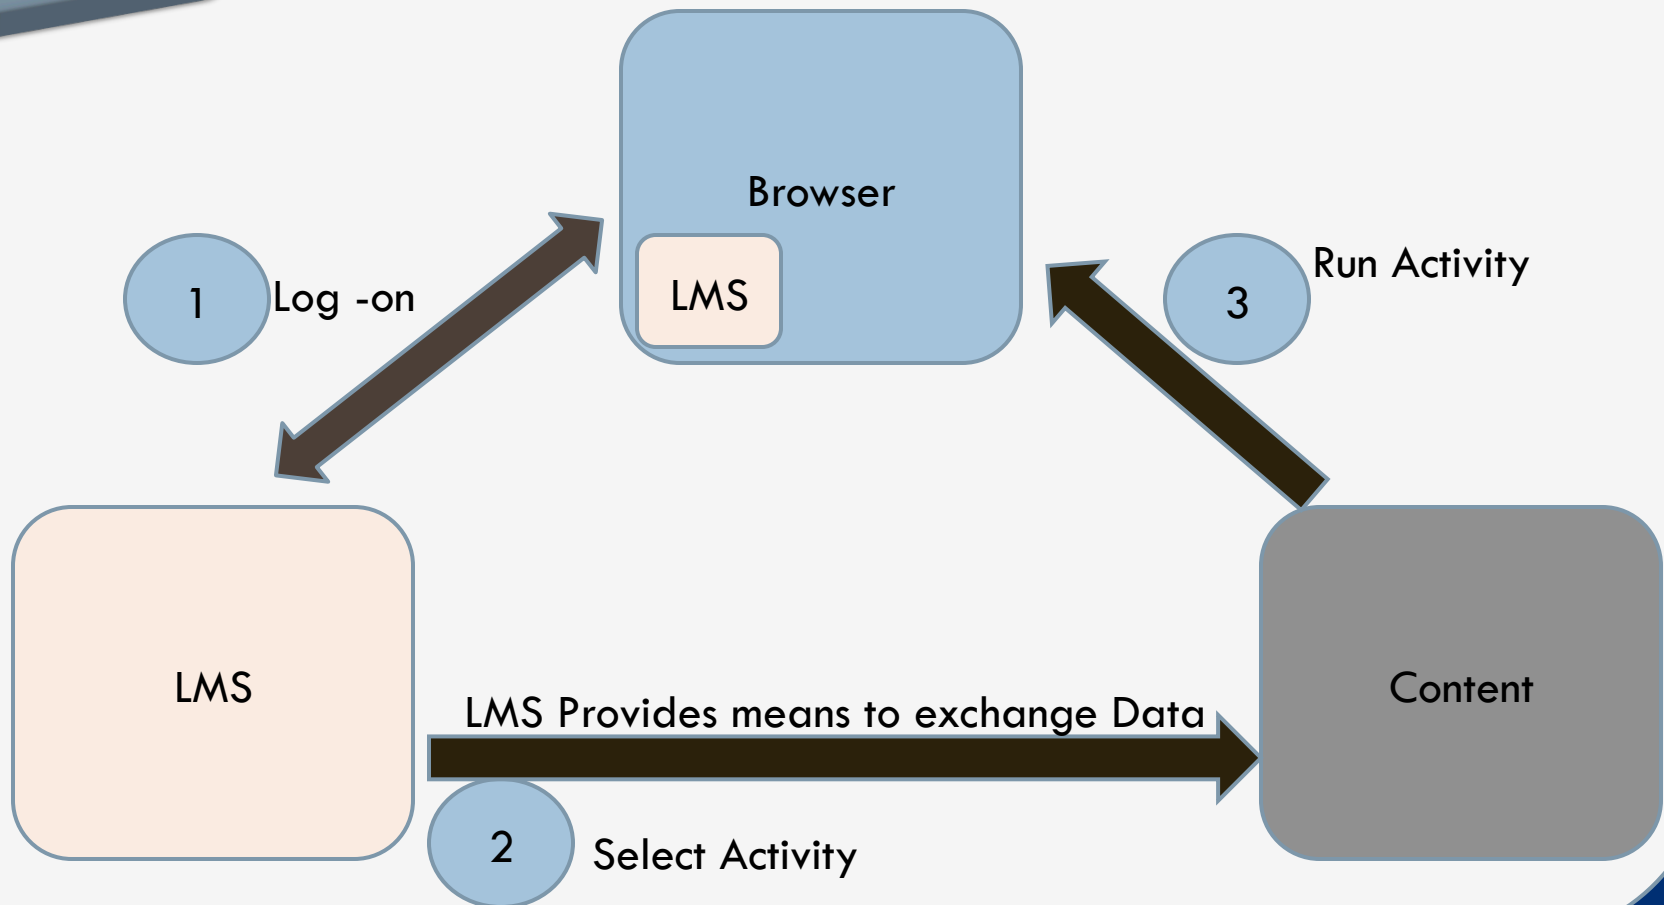

The SCORM Run-Time Environment (RTE) handles requirements for launching content objects, establishing communication between learning management systems (LMSs) and shareable content objects (SCOs), and managing the tracking information that can be communicated between SCOs and LMSs. It basically defines three things

- Launching Content Object
- Run Time API
- Run Time Data Model

3.

eLearning Standards

LMS Activity Run Time Cycle

3.

Content

3.

eLearning
Standards

Sequencing and Navigation

SCORM Sequencing.

SCORM Sequencing defines the behaviors and data model used by the SCORM run-time environment to determine how a content package will be delivered as a learning experience. It defines the functionality that a SCORM-conformant LMS must implement to process sequencing information at run-time based on learner interaction with content objects.

SCORM Sequencing depends on the following concepts:

- An activity tree representation of learning activities
- The Sequencing Definition Model
- The Sequencing Behaviors

SCORM Navigation

SCORM Navigation defines how learning and system-initiated navigation events are triggered and processed, resulting in the identification of learning activity for delivery. Navigation is the process by which a learner and an LMS cooperate to identify navigation requests to realize a learning experience.

4.

Choosing
eLearning
Platform

Basic Definition

LMS – Learning
Management System

LCMS – Learning Content
Management System

CrMs – Course
Management System

VLE – Virtual Learning
Environment.

4.

Choosing
eLearning
Platform

Basic Definition

| Category | Primary Function | Used By |
|----------|---|-------------------------------|
| LMS | A system primarily designed to manage & deliver asynchronous e-learning | Business & Government |
| LCMS | Content Authoring + delivery asynchronous Learning. | Business & Government |
| CrMS | Manage all aspects of live instructor led classroom training | Higher Education |
| VLE | Virtual Business meeting & Collaboration | Formal Education Environment. |

Choosing
eLearning
Platform

Choosing a eLearning Platform for Specialized medical/ Surgical field

High level requirement for Patient Education.

- Need for the **content authoring** tool for transforming DICOM images into SCORM conformant eLearning content for online Diagnosis of patient.
- Patient profile management with complete Diagnosis report.
- Interaction with Patient using Web Conferencing, Wikis, IM and discussion forums.

Choosing
eLearning
Platform

Step - 1

Choosing a eLearning Platform for Specialized medical/ Surgical field

High level requirement for Neurosurgery Education.

- Content Authoring tools for development of eLearning content related to Virtual Medical Simulations(VMS).
- Centralized Repository.
- Knowledge Centre.
- Administration.
- Course Management.
- Facility for Providing Webinars and Live exam.
- News Forum.
- Profile Management.
- Mobile Portability.
- Grading & Testing.

Choosing
eLearning
Platform

Step - 2 Creating System Matrix

| | DICOM in LMS | Patient + Student Profile Management | Knowledge Centre (Wiki) | Web Conferencing | Assessment + Tracking | Security + Authentication | Interaction | Portability On Mobile | Mailing | Integration With CMS |
|--------------|--------------------|--------------------------------------|-------------------------|------------------|-----------------------|---------------------------|-------------|-----------------------|---------|----------------------|
| Product Name | (Weighting Factor) | | | | | | | | | |
| | | | | | | | | | | |
| Moodle | | | | | | | | | | |
| Sakai | | | | | | | | | | |
| eFront | | | | | | | | | | |
| ATutor | | | | | | | | | | |
| Docebo LMS | | | | | | | | | | |
| OLAT | | | | | | | | | | |
